Advantages of ACIDCLEAN

- Removes mineral deposits
- Detergency properties

• Equipment cleaning

Acidclean is a concentrated product for removing the milkstone and cleaning the milking equipment. Acidclean has a strong cleaning power through the surfactants contained in its formula.

• Properties

Acidclean has a very high rate of phosphoric acid (strengthened with sulfuric acid) which gives the capacity to eliminate the mineral deposit coming from the milk as well as the calcium carbonate film left by the water after the rinsing stage.

• Direction for use

- After milking, rinse the equipment with tepid water. Circulate a solution of Acidclean at a concentration of 0.5% and a duration time of 8-10 minutes.
- Rinse with cold water.

• Main components of ACIDCLEAN

Orthophosphoric acid, Sulfuric acid, antifoaming surfactants...
