4 In between

Advantages of PERFO GRIF

- Fast disinfection of the claw.
- Reduces risk of cross contamination.
- Bactericidal, sporicidal

Do you know that during the milking an infected cow could contaminate the 6 following ones?
(O'SHEA, Bull. Int. Dairy fed 1987 : 215. 5-32)

• Prevention of cross contamination

Perfo Grif has been created to avoid this risk. Perfo Grif is effective against bacterias (test EN 1276) and spores (test EN 13704).

After the milking of an infected cow : disinfect the claws with Perfo Grif.

• Direction for use

Dilute Perfo Grif in a bucket of 10 L of cold water, soak the claw for 1 minute (recommended dilution in the technical documentation).
In spray: Spray a dilution of Perfo Grif directly into the claw (recommended dilution in the technical documentation).

Disinfection of the milking robots brushes, meet the manufacturer's for the parameters of the robot disinfection

• Main components of PERFO GRIF

Active(s) substance(s) per 100g of product: peracetic acid 5g + hydrogen peroxide 14.5 g

Disinfectants are regulatory biocides. They have guarantees of efficiency and protection of human, animals and the environment.
Use biocides safely. Before use read the label and product information
