

VIROLAC film +

A very effective marking teat dip

MILKING

- 1 Before
- 2 During
- 3 After/Après
Después
- 4 In between

Advantages of VIROLAC FILM PLUS

- Efficiency cosmetics
- Powerful disinfectant: LSA® (bactericidal, virucidal, yeasticidal)
- Good colorant action

• Teat protection

Virolac Film + contains cosmetic agents, including Aloe Vera, known for their efficiency and adapted to the most difficult breeding situations. Virolac Film + green color improves the marking of the teats, this allows a comfortable use, ideal for large herds.

• Teat disinfection

Virolac Film + contains a very powerful active disinfectant complex: LSA®.

LSA® is based on a hydroxy acids complex.

The LSA® complex is effective on mastitis causing germs: (Streptococcus uberis, Streptococcus agalactiae, Staphylococcus aureus, Escherichia coli, ...)

The LSA® complex is also effective on yeasts: Candida albicans (EN 1657), and Ortopoxvirus the responsible of vaccinia (NFT 72-180).

• Direction for use

Ready to use after milking.

Can be used all year round and it is particularly recommended when the microbial pressure is high and when weather conditions are unfavorable.

• Main components of VIROLACFILM +

LSA® (hydroxy acids complex), moisturizers, emollients, healing additive (Aloé Vera).

Active (s) substance (s) per 100g of product: acid L - (+) - lactic 2g + Salicylic acid 0.099g

Disinfectants are regulatory biocides. They have guarantees of efficiency and protection of human, animals and the environment.
Use biocides safely. Before use read the label and product information.
